# FarStone®
*Total Backup Recovery* ™

# **Total**Recovery™ Pro 7

## Simplify & automate backup and recovery for personal computers & workstations

**Total**Recovery™ Pro is all you need to totally protect your computers from unforseen disasters. **Total**Recovery™ assures that photos, music, documents and everything you care most about are well protected and can be easily recovered. **Total**Recovery™ offers comprehensive backup & recovery features, including file and folder backup, complete system and incremental image backup. Set your PC backup schedule, and **Total**Recovery™ automatically backs up your data without disrupting any work in progress.

## Main Features

✓ Full backup (disk imaging) or back up only selected files & folders

✓ Create backup CD/DVD or image files with a few clicks

✓ Backup Anywhere to HDD, USB, Network Drive, NAS, CD/DVD or even FTP server

✓ Restore system to original or different computers

✓ Automatically run "Set It & Forget It" scheduled full or incremental backups

✓ Pre-OS program manager works even when the operating system doesn't

## System Requirements

### Operating System Supported

- Windows 7 (32 & 64-bit)
- Windows Vista (32 & 64-bit)
- Windows XP (32 & 64-bit)

### Backup Destination Storage Supported

- Internal Hard Drive, External USB Hard Drive, USB Flash, SSD (Solid State Drive), Firewire (IEEE 1394) Device
- Network Share Folder, Network Drive, NAS (Network Attached Storage), iSCSI, and iPSAN Storage
- RAID 0/1/5/10/JBOD Disk Array
- CDR/RW and DVD+-R/RW
- FTP Offsite Backup

## Features & Benefits

### A total backup and recovery solution for laptops, workstations, and PCs

With **Total**Recovery™, you'll find a solution to resolve all of your backup and recovery pain points. The product is intuitive and allows you to perform file backups, complete backups, and even incremental backups in no time.

### Automatically run scheduled full and incremental backups

**Total**Recovery™ Backup Scheduler allows you to perform unattended backups on all of your PCs and workstations.

### Migrate & Upgrade Easy

It takes only minutes for **Total**Recovery™ to completely move everything including all files, photos, music, applications' settings, and your operating system to your newly purchased big hard drive or new computer.

### Universal Restore, Dissimilar Restore

Restore to original or different computer (migrate to a new purchased computer), or even to virtual machine without any hassle.

### Max Speed with SSD (Solid State Drive)!

**Total**Recovery™ clones (move) your hard drive to SSD drive in minutes (vs spending hours or weeks reinstallation everything).

### Experience NO Business operation downtime!

Restoring a backup image takes very little time. Performing backups will not disrupt any applications or prevent access to your database.

### FileRescue-911™ capability

**Total**Recovery™ includes a powerful file rescue utility allowing you to boot into a crashed system using its built-in pre-operating system in order to retrieve your precious files from a non-operational drive.

### Google Desktop Search

You can enable search engine support and use Google Desktop to locate and recover files and folders contained in Backup Images.

### Quota Management! - No more "Disk Is Full" error messages!

Create and enforce quota limits for the storage usage of each workstation. **Total**Recovery™ will reuse the oldest backup space for new backup automatically.

### One-Click Backup & Recovery

You can perform backup and recovery for your whole system partition with one simple click.

### Built-in VMware™ P2V support

You can backup a VMware host machine in an image or convert a **Total**Recovery™ image file to a VMware image file format (VMDK) to run it on a virtual machine.

### Restore Crashed System with Bare Metal Recovery

With **Total**Recovery™, you can perform a bare metal full system restore in just a few minutes. That is, no need to install Windows, applications and recover your data.

### Advanced Incremental Backup Technology

**Total**Recovery™ backs up only changes (in sectors) to your file, unlike many other backup products that only back up entire files. For example, it takes only a few hundred KBs to incrementally back up your outlook (.pst) file, while other products back up entire outlook .pst file (a few GBs) each time.
